## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

-Regarding independent claim 9, the claim is patentable over Paulraj et al and Ling et al, (both previously cited), based on reasons stated in REMARKS, pages 8 and 9, of the Amendment filed on 12/22/08, and allowed because of following reasons: none of prior art of record teaches or suggests a receiver unit in a multiple-input multiple-output (MIMO) communication system, comprising: a front end processor configured to receive at least one signal received via different spatial channels; a channel quality estimator coupled to the front end processor and configured to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information for each subcarrier of an Orthogonal Frequency Division Multiplexed (OFDM) signal received at the receiver based upon an average of SNR information over all of the different spatial channels; and a transmit data processor configured to receive and process the SNR information transmission.

-Regarding independent claim 11, the claim is patentable over Paulraj et al and Ling et al, based on reasons stated in REMARKS, page 9, of the Amendment filed on 12/22/08, and

Art Unit: 2611

allowed because of following reasons: none of prior art of record teaches or suggests a receiver unit in a multiple-input multiple-output (MIMO) communication system, comprising: a front end processor configured to receive at least one signal received via different spatial channels; a channel quality estimator coupled to the front end processor and configured to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information, based upon an average of SNR information over a plurality of subcarriers of an Orthogonal Frequency Division Multiplexed (OFDM) signal received at the receiver; and a transmit data processor configured to receive and process the SNR information transmission.

-Regarding independent claim 12, the claim is patentable over Paulraj et al and Ling et al, based on reasons stated in REMARKS, page 9, of the Amendment filed on 12/22/08, and allowed because of following reasons: none of prior art of record teaches or suggests a receiver unit in a multiple-input multiple-output (MIMO) communication system, comprising: a front end processor configured to receive at least one signal received via different spatial channels; a channel quality estimator coupled to the front end processor and configured to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information, based upon an average of SNR information over all of the different spatial channels; and a transmit data processor configured to receive and process the SNR information transmission.

-Regarding independent claim 17, the claim is patentable over Paulraj et al and Ling et al, based on reasons stated in REMARKS, pages 8 and 9, of the Amendment filed on 12/22/08, and allowed because of following reasons: none of prior art of record teaches or suggests a receiver unit in a multiple-input multiple-output (MIMO) communication system, comprising: receiving means to receive at least one signal received via different spatial channels; estimating means to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information for each subcarrier of an Orthogonal Frequency Division Multiplexed (OFDM) signal received at the receiver based upon an average of SNR information over all of the different spatial channels; and a transmit data processor configured to receive and process the SNR information transmission.

-Regarding independent claim 19, the claim is patentable over Paulraj et al and Ling et al, based on reasons stated in REMARKS, page 9, of the Amendment filed on 12/22/08, and allowed because of following reasons: none of prior art of record teaches or suggests a receiver unit in a multiple-input multiple-output (MIMO) communication system, comprising: receiving means to receive at least one signal received via different spatial channels; estimating means to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information, based upon an average of SNR information over a plurality of subcarriers of an

Orthogonal Frequency Division Multiplexed (OFDM) signal received at the receiver; and a transmit data processor configured to receive and process the SNR information transmission.

-Regarding independent claim 20, the claim is patentable over Paulraj et al and Ling et al, based on reasons stated in REMARKS, page 9, of the Amendment filed on 12/22/08, and allowed because of following reasons: none of prior art of record teaches or suggests a receiver unit in a multiple-input multiple-output (MIMO) communication system, comprising: receiving means to receive at least one signal received via different spatial channels; estimating means to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information, based upon an average of SNR information over all of the different spatial channels; and a transmit data processor configured to receive and process the SNR information transmission.

-Regarding independent claim 25, the claim is patentable over Paulraj et al and Ling et al, based on reasons stated in REMARKS, pages 8 and 9, of the Amendment filed on 12/22/08, and allowed because of following reasons: none of prior art of record teaches or suggests a method for providing SNR for feedback in a wireless communication system, the method comprising: receiving procedure to receive at least one signal received via different spatial channels; estimating procedure to estimate characteristics of a plurality of transmission channels used for data transmission and to provide signal-to-noise and interference (SNR) information for one or more of the different spatial channels, wherein the channel quality estimator is configured to provide the SNR information for each subcarrier of an Orthogonal Frequency Division

Multiplexed (OFDM) signal received at a receiver based upon an average of SNR information over all of the different spatial channels; and a processing procedure to process the SNR information for transmission.
